Profile

After spending the last year exploring software development, learning enough to have a fluency in the professions' jargon and to consider myself a novice developer, I am now looking for a new opportunity that would combine past management, leadership and planning experience with my passion for science, technology and finding solutions to tough problems.

Skills

Strategic Planning

Proven ability to work in a proactive manner that leads to well thought out and orchestrated actions.

Leadership

Able to demonstrate success in forming healthy working relationships that result in increased production and employee satisfaction

Process Improvement

Consistently evaluate, and when appropriate, make adjustments to business processes to deliver results.

Technical

HTML	Javascript	Maven
CSS	Jquery	JPA
Java	MS SQL Server	REST
Junit Testing	SQL	Git

Experience

Zip Code Wilmington

2016-2017

Software Development Student + Apprenticeship

Spent 12 weeks immersed in a rigorous training program centered in Java, Object-Oriented Programming and Test-driven Development, totaling over 800 hours of instruction and hands-on software development. At the end of the classroom instruction portion of the program, I participated in a 6 month apprenticeship at WSFS bank in Wilmington, a partner of Zipcode, where I gained experience with workplace practices by addressing ticket items and bugs for the heavily Java based shop.

Freedom Pathology Partners

2014-2016

Vice President of Operations

As VP of Operations, my main responsibilities included coordinating the daily operations of the business, overseeing laboratory processes, personnel and customer requests. In addition to those responsibilities I worked in collaboration with the business partners to manage, develop and grow the business from a laboratory handling 2K specimens (130K revenue) in the first year, to 20K specimens (925K revenue) in the second year.

Pathology Lab Solutions

Director of Clinical Operations

2008-2014

I directed activities related to all states of lab design and operations, including licensing and accreditation. I hired and trained lab staff, coordinated lab openings and initiated customer follow-up to ensure success of the lab. I incorporated ancillary testing techniques to enhance cancer screening and diagnostic abilities for physicians and patients, as well as consulted with physicians and administration on lab efficiency and management issues.

Metamark Genetics(formally Uropath)

Histotechnologist

2007-2008

As a histotechnologist, my focus was on the preparation of human tissue samples for viewing under a microscope. This position integrated biology, chemistry, histochemistry and immunology in order to identify tissue and cell types as well as microorganisms and pigments. Slide preparation made in the lab were then used by physicians to diagnose cancer and other disease states.

Education

Drexel University, College of Medicine - Philadelphia, Pennsylvania
Master of Science, Molecular Pathobiology

Concordia College - Moorhead, Minnesota
Bachelor of Arts, Biology
